PROFILE

Python backend developer with one year at Datax.ai (six months intern, six months full-time). Built a reusable FastAPI service foundation with 85%+ test coverage, a FAISS/Gemini RAG pipeline that cut latency 35%, and a Gemini/MCP Slackbot for natural-language database queries. Production work spans REST APIs, document ingestion, PostgreSQL, Docker and GCP.

EXPERIENCE

Datax.ai (CrowdANALYTIX) | Associate Software Developer

Feb 2026 - Present

Software Developer Intern | Aug 2025 - Jan 2026 | Bengaluru

- Built a company-wide FastAPI service template using a unit-of-work pattern and 85%+ test coverage, giving new backend services a shared, tested foundation.
- Built a FAISS and Gemini RAG pipeline over PDFs and Markdown pulled from URLs, cutting response latency by 35%.
- Shipped a Gemini-powered Slackbot backed by an MCP server so teams can query company databases in plain English.
- Productionized Google Cloud Storage file-ingestion pipelines with regex-driven PDF and image extraction to make source content usable by backend workflows.
- Designing a supplier-integration connector using hexagonal architecture, so new suppliers can plug in without changes to core domain logic.

HCLTech | Backend Developer Intern

Jul 2024 - Aug 2024

- Built Django RBAC with object-level permissions across mentor and intern roles, securing 50+ resources.
- Built a WebSocket task-assignment system instead of polling, cutting communication latency by 70%.
- Built YouTube-based skill tracking to replace manual onboarding, reducing onboarding time by 40%.

PROJECTS

Percipio | Freelancing Platform

Jun 2025

- Built 20+ Django REST Framework endpoints with JWT and RBAC for freelance workflows; integrated Stripe with verified webhooks for payments and WebSocket chat with PostgreSQL message history for client communication.

StockSavvy | Inventory Management System

May 2024 - Jun 2024

- Built a Django and MySQL inventory backend with RBAC, CRUD, search and filtering; optimized queries to speed up inventory processing.

TECHNICAL SKILLS

Production AI: Python, RAG, Gemini API, MCP tool calling, LangChain, embeddings, FAISS, pgvector

Backend: FastAPI, Django, Django REST Framework, REST APIs, Pydantic, SQLAlchemy, asyncio, WebSockets

Data and delivery: PostgreSQL, SQL, MySQL, Redis, GCP (Cloud Storage), Docker, Git, CI/CD, pytest

Engineering: DSA, OOP, hexagonal architecture, JWT/OAuth2, RBAC, unit and integration testing

Learning: Azure, Kubernetes, distributed systems at scale

EDUCATION AND ACHIEVEMENTS

B.Tech, Computer Science | Ajay Kumar Garg Engineering College, Ghaziabad | Aug 2021 - Aug 2025 | CGPA: 8.1

Solved 600+ DSA problems across LeetCode, Codeforces and GeeksforGeeks. Mentored 200+ students in a DSA bootcamp and helped run a five-day web development workshop.
